

Joseph Stanfield

jlstan06@yahoo.com / 502-599-2742 / Bardstown, KY

Summary

Full-Stack Software Engineer with a proven track record of leading teams of up to 15 developers and developing scalable applications for large enterprises. Experienced in project management for mid- to large-sized logistics companies. Possesses a strong desire to learn and stay up-to-date with new technologies, and enjoys mentoring junior developers. Equipped with technical and soft skills acquired from eight years of experience in sales and sales management. Proficient in agile methodology, specifically scrum.

Experience

Owner and Developer

Bourbon City Web Development • Bardstown, KY

09/2022 - Present

Design and develop a variety of applications for clients, including clothing companies, as well as painting and landscaping companies. My projects range from simple informational websites to complex e-commerce websites. Additionally, I have assisted clients with search engine optimization (SEO) for their existing sites. By working on diverse projects, I have honed my technical expertise and communication skills, allowing me to better understand and meet the needs of my clients.

Senior Software Engineer

KFC - Yum Brands! • Louisville, KY

01/2022 - Present

Develop software for a Fortune 500 company, specializing in one of the fastest-growing restaurant brands globally. Mentored junior developers to enhance their skills and improve their performance. Successfully managed the transition of React projects to a new backend system utilizing GraphQL, resulting in improved efficiency and productivity.

Software Engineer

Churchill Downs • Lexington, KY

06/2021 - 01/2022

Designed and developed software solutions for the gaming/casino industry using various technologies such as Angular, Node, PHP, and Java. I also prepared and delivered technical presentations to stakeholders and business owners, ensuring that they understood the technical aspects of the projects. I utilized the agile scrum methodology to manage and build my projects, ensuring that they were delivered on time and met all the requirements of the clients.

Front End Software Engineer

Integrity Express Logistics • Cincinnati, OH

11/2019 - 06/2021

Designed and developed enterprise-level applications using React, PHP, and SQL. As a front-end developer, I played a crucial role in ongoing projects, ensuring they met the companies' expectations and were delivered on time. Additionally, I was responsible for meeting with stakeholders and reviewing company needs, ensuring that the solutions we provided met their specific requirements. I also helped build a RESTful API using PHP with a PostgreSQL relational database, resulting in faster and more efficient data retrieval and processing.

Software Engineer

Blue Cross Blue Shield • Jacksonville, FL

04/2019 - 11/2019

Successfully designed and developed multiple enterprise-level applications, primarily using the React framework. I

have utilized a mix of agile and waterfall methodologies to ensure that these projects were delivered efficiently and met the specific requirements of stakeholders. Despite tight deadlines, I was able to deliver quality results within the given timeframe, demonstrating my strong time management skills and ability to work effectively under pressure.

Programming Lead

Lambda Academy

09/2018 - 04/2019

Managed teams of 8-15 students in daily coding challenges using Javascript and the agile methodology to simulate a real work environment. Provided daily feedback and resolved curriculum-related issues through various channels such as slack and code review to ensure students' continuous improvement. Mentored students on effective learning techniques and problem-solving strategies in programming. Conducted daily stand-up meetings to foster teamwork, facilitate knowledge sharing, and provide guidance on weekly study materials.

Skills

React, Node.js, GraphQL, Communication skills, Time management, Leadership, Typescript, JavaScript, Angular, HTML, CSS, Redux, PHP, WordPress, SEO, PostgreSQL, MongoDB

Education

Computer Science

Lambda Bootcamp

01/2019

Business

University of Louisville • Louisville, KY

05/2014

Projects

Ace Gymnastics - Bourbon City Web Development

- Ace Gymnastics is a cherished family-owned gymnastics facility, situated in the heart of Bardstown, KY. Our primary objective for this project was to establish a robust online presence and enhance the convenience of class registration and event booking for parents. To achieve this, we integrated Jackrabbit, a highly acclaimed management system that simplifies class registration processes for parents, enabling them to register and pay online seamlessly. Additionally, we incorporated a user-friendly calendar that displays all upcoming classes and events. We have also ensured that our website is mobile-friendly, allowing parents to register for classes on-the-go, anytime and anywhere.

KFC - Yum Brands!

- KFC, the renowned fast-food chain headquartered in Louisville, KY, is the second-largest restaurant chain in the world, second only to McDonald's. I am proud to be a part of the team responsible for developing the KFC online ordering application, which allows customers to easily order their favorite food items from the comfort of their own homes, while also granting them access to exclusive deals. This application has played a critical role in helping KFC and its parent company Yum continue to succeed during times of shutdowns and reduced foot traffic, offering customers a convenient and accessible way to enjoy their meals.

Twinspires - Churchill Downs

- Twinspires is the premier online destination for legal wagering in the United States, offering a range of options such as sports betting, online casino, and advance deposit wagering. As the lead front-end developer, I was responsible for crafting a seamless user experience for customers, with a specific focus on the horse racing wagering portion of the software. This critical application drives a significant portion of Churchill Downs' revenue

and played a key role in the company's success during the COVID-19 pandemic when many were forced to stay home. My contributions helped to ensure that Twinspires remained the top choice for legal wagering, providing a user-friendly and engaging platform for customers.

NEXUS - Integrity Express Logistics

- The application I developed effectively bridges the communication gap between brokers and clients in the logistics industry. With a user-friendly dashboard, clients can easily access information on their current, past, and upcoming loads with their broker, fostering transparency and accountability. Moreover, the application enables seamless communication between brokers and clients throughout the entire relationship, ensuring that all parties are on the same page and making the logistics process as smooth and efficient as possible.

Quote Analysis - Integrity Express Logistics

- This application provides a broker with a quick and easy tool in order to provide an accurate quote to the client. This helps keep margins on loads positive and provides the brokers with more information when speaking with potential clients. Was a massive driving force for revenue.

ITMS - Integrity Express Logistics

- The ITMS software served as the core tool for brokers to schedule and manage all routes with drivers and dispatchers. Although it was based on a legacy code base, it played an essential role in the company's operations. Brokers relied on ITMS to perform their daily tasks, using it every minute of their workday. This software facilitated access to leads for new companies and stored all the necessary information for drivers and dispatchers. Additionally, brokers could view the history of the relationship with clients and generate quotes. (Quote Analysis functionality would later replace this feature).

Project Planning - Blue Cross Blue Shield

- This is a powerful team management application designed to streamline and enhance workflow in any environment, whether it's agile, waterfall, or ad hoc. With this application, managers can effortlessly communicate with and assign tasks to team members, while monitoring progress in real-time. Meanwhile, team members can leave detailed notes and feedback, and easily track their task list through the application. Overall, this application greatly simplifies team management and allows for more intelligent, efficient collaboration.

Business Allowance - Blue Cross Blue Shield

- This application streamlines the management of proposed projects across the company, providing administrators with a comprehensive view of financials, dependencies, and deliverables. With intuitive features for viewing, approving, and tracking project data, this tool simplifies the project management process and supports informed decision-making.
